

Infertility 2008-09

Georgia and her husband Robert, both 39 years of age, have been married 10 years. They have come to the desperate realization that they may not be able to have children. They have come to you for help. As an intern working with a physician specializing in infertility, what can you do for them?

Prepare an assessment of your findings, relating what is normal and abnormal about the couple's ability to reproduce and your recommendations for treatment. Present your findings to medical professionals on Wednesday, October 8th.
