

Work Force: The Realities ~ 2013

As the workforce ages and technologies evolve, there is a growing concern we are not preparing the next generation for the jobs of the future.

Using current data such as Labor Market Information (LMI) and Occupational Employment Statistics (OES), create a career plan.
Create a video modeled on *Did You Know* to help make sense of the LMI data your group has investigated.
Create an educational plan for 8th thru 12th graders to allow schools to systematically help students with their career choices.
How do you use LMI data to design training and education opportunities so that funds are allocated in a meaningful way?

Present on November 14th.
